

# SEA COACHING

A dedicated resource that ensures students maximize the potential of their assistive technology at a fraction of the cost.

## TRACKING THE STUDENT JOURNEY

We have a proven track record of fostering leaps in student independence through focusing on the student's area of greatest need and then tracking the student journey to independence.

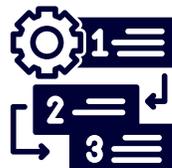

Student centered and individualized approach

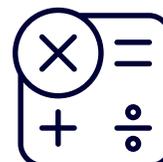

Written Expression

Comprehension

Task Management Organization

Math

## COMPLIANCE WITH INDEPTH REPORTING

LEARNstyle uses a proprietary tracking and reporting system, Student Management & Tracking System (SMTS). SMTS is a complete training management system that schedules all training sessions, provides automatic communication with schools, tracking of all sessions, synchronization with our Technology Coaches' calendars, invoicing and board level reports to training session reports. The system monitors and tracks all training sessions for every student.

## T.R.U.S.T COACHING MODEL

Our process begins with developing Traction through the engagement of the student based on a Relationship based approach. We implement a dynamic of Understanding the student's interests, challenges and needs. Then we can determine which high yield evidence based instructional Strategies will address the student's challenges and needs best. Now the strategy is overlaid with the Technology to demonstrate skill development and an outcome of independence.

## COST SAVINGS

For every 1,000 hours of training delivered, LEARNstyle saves boards over \$135,000 when compared to the cost of delivering training internally. With our Fee for Service model you only pay when the student receives the coaching.
